# 1 The only section

- We use bibtex for references (e.g. **?**).

- Ideally all numbers should be softcoded, and come directly from output. For example, in our baseline simulations setup, where we simulate the throw of two 6-sided dice, the average sum of the two throws is equal to 6.95. That way all numbers are by construction always up-to-date.

- Below, Figure **??** includes a histogram of the simulation exercise.

**Figure 1:** Numerical frequency for the sum of two six-sided die. Figure based on 1000 throws.
**Figure 2:** Numerical frequency for the sum of two eight-sided die. Figure based on 500 throws.
